

 Yukon University	School of Science
	CPSC 129
	Object Oriented Programming II
	Term: Fall 2024 Number of Credits: 3
Course Outline	

INSTRUCTOR: Kate Chatfield-Reed

E-MAIL: kchatfieldreed@yukonu.ca

OFFICE: A2806

PHONE: (867) 456-8563

TIME/DATES: M/W 1 pm – 2:30 pm in A2702

OFFICE HOURS: *anytime*, schedule by email

COURSE DESCRIPTION

CPSC 129 continues the presentation of OOP begun in CPSC 128. Now that students have mastered the core computational constructs the emphasis is on using them to express more subtle algorithms, and to compose more sophisticated data structures and classes.

COURSE REQUIREMENTS

Prerequisite(s): CPSC 128

EQUIVALENCY OR TRANSFERABILITY

Receiving institutions determine course transferability. Find further information at:

<https://www.yukonu.ca/admissions/transfer-credit>

LEARNING OUTCOMES

Upon successful completion of the course, students will be able to:

- to produce an object-oriented (OO) analysis and design for a problem.
- to apply the principles of class inheritance, composition, and association to construct hierarchies of new classes.
- to use the components and constructs necessary to implement an OO program in efficient, reusable, extensible code.
- to design alternative algorithms to solve a variety of problems.
- to design alternative data structures to represent the information necessary to solve a variety of problems.
- to evaluate programs through the careful application of appropriate testing techniques to assess both their correctness and their memory and processor performance characteristics.

- to document the analysis, design, implementation and testing of a program constructed using OO principles.

COURSE FORMAT

Weekly breakdown of instructional hours

This course will be delivered with the following breakdown per week: 3 hours of lecture and 1 hour of tutorial. Although it will vary from individual to individual, students should expect to spend 6 hours on course material outside of the classroom time (per week) on completing assignments.

Delivery format

This course will be delivered in a face-to-face (in person) format. However, lectures may be attended remotely and recorded to be watched later (upon request). Students will be expected to access the YU online learning platform for additional material (Moodle).

EVALUATION

Exercises	10 %
Assignments	60 %
Final	30 %
Total	100%

Weekly Exercises (10%): Exercises are an opportunity to work in class with lots of support from classmates and the instructor. Problems will be assigned most weeks and solutions to them will be made available. Students should be certain to do these problems promptly or they risk being unable to understand the material in the next class. Students will hand in their work on the exercises each week to be graded. Completion of the exercises is worth 10% of the final course mark.

Assignments (60%): There will be weekly assignments over the course of the term worth 60% of the final mark. Where the exercise problems are intended to assist the student in learning new material and are marked for completion, the assignments are meant to reinforce and extend the student's understanding of material that has already been learned. These assignments should reflect the student's own work and should be completed individually without assistance from LLMs (such as ChatGPT). Assignments are subject to a 5% late penalty per day they are late.

Final Examination (30%): A final examination which will cover the entire course, and be worth 30% of the final mark, will be held during the examination period at the end of the semester. The date and time will be announced as soon as it is set.

COURSE WITHDRAWAL INFORMATION

The last date to withdraw without academic penalty is Nov. 4th, 2024. Refer to the YukonU website for other important dates.

TEXTBOOKS & LEARNING MATERIALS

No textbook is required for this course. All the necessary content is provided either through the course Moodle or online resources.

ACADEMIC INTEGRITY

Students are expected to contribute toward a positive and supportive environment and are required to conduct themselves in a responsible manner. Academic misconduct includes all forms of academic dishonesty such as cheating, plagiarism, fabrication, fraud, deceit, using the work of others without their permission, aiding other students in committing academic offences, misrepresenting academic assignments prepared by others as one's own, or any other forms of academic dishonesty including falsification of any information on any Yukon University document.

Please refer to Academic Regulations & Procedures for further details about academic standing and student rights and responsibilities.

ACCESSIBILITY AND ACADEMIC ACCOMMODATION

Yukon University is committed to providing a positive, supportive, and barrier-free academic environment for all its students. Students experiencing barriers to full participation due to a visible or hidden disability (including hearing, vision, mobility, learning disability, mental health, chronic or temporary medical condition), should contact [Accessibility Services](#) for resources or to arrange academic accommodations: access@yukonu.ca.

TOPIC OUTLINE

Object-oriented design, search, algorithm analysis, GUIs, MVC architecture, recursion, sorting, data processing, and image processing.
